

Gymnasium Projects

ArcSine Engineering has designed numerous sports facility projects in California and Oregon, including gymnasiums, locker and weight rooms, faculty offices, concession stands and sports medicine rooms. These projects each required close coordination with architects, landscape designers, and civil engineers to meet aesthetic and functional criteria. In addition to lighting design our services also included electrical, mechanical, controls, and power distribution design, and construction services. Below is a partial list of ArcSine's sports lighting projects.

Lighting
Electrical
Power Distribution
Mechanical
Controls
Construction Services

Project	Location
